## Precautions For use

### (1) Storage

In order to avoid absorption of moisture it is recommended that the products are stored in the dry box (or dessicator ) with a dessicant. Alternatively the following environment is recommended:

Storage temperature :5°C~30°C      Humidity:60% HR max.

(2) Any mechanical force or any excess vibration should be avoided during the cooling process after soldering.

(3) Components should not be mounted on distorted Printed Circuit Boards.

(4) Devices should not be used in any type of fluid such as water,oil,organic solvents etc.  
When cleaning is required,IPA should be used.

(5) Devices should be soldered within 7 days after opening the moisture-proof packing.

(6) ESD Precautions.Static Electricity and surge damages LEDs.

It is recommended that wrist bands or anti-electrostatic gloves be used when handling the LEDs.All devices,equipment and machinery should be properly grounded.

(7) It is recommended to use individual resistors when LEDs are used in parallel circuits in order to improve performance.
